Python Programming Practice Problems

Assignment-1

1. Write a Python program to print **"Hello, Python!"** on the screen.
2. Write a Python program to print your **name, university, and country** on three separate lines.
3. Write a Python program to display the following pattern:

   *****
   *****
   *****
4. Write a Python program to print:

   Welcome
   to
   Python
   Programming
5. Write a program to print the message **"Python is easy to learn."** five times.
6. Write a Python program to store the number **25** in a variable and print it.
7. Write a Python program to store two numbers **10 and 20** in variables and print their sum.
8. Write a Python program to calculate the **sum of 8 and 12**.
9. Write a Python program to calculate the **difference between 50 and 18**.
10. Write a Python program to calculate the **product of 7 and 9**.
11. Write a Python program to calculate the **division of 100 by 5**.
12. Write a Python program to find the **square of a number (e.g., 6)**.
13. Write a Python program to find the **cube of a number (e.g., 4)**.
14. Write a Python program to calculate the **remainder when 25 is divided by 4**.
15. Write a Python program to calculate the **average of three numbers: 10, 20, and 30**.
16. Write a Python program that asks the user to enter their **name** and prints a greeting message.
17. Write a Python program that asks the user to enter **two numbers** and prints their **sum**.
18. Write a Python program that asks the user to enter **two numbers** and prints their **product**.
19. Write a Python program that asks the user to enter a **number** and prints its **square**.
20. Write a Python program that asks the user to enter a **number** and prints its **cube**.
21. Write a Python program to calculate the **area of a rectangle** (length and width entered by the user).
22. Write a Python program to calculate the **perimeter of a rectangle**.
23. Write a Python program to calculate the **area of a circle** (radius entered by the user).

24. Write a Python program to convert **temperature from Celsius to Fahrenheit**.
25. Write a Python program to convert **kilometers to meters**.
26. Write a Python program that asks the user to enter their **age** and prints the age.
27. Write a Python program that asks the user to enter **three numbers** and prints their **sum**.
28. Write a Python program that calculates the **simple interest** given principal, rate, and time.
29. Write a Python program that calculates the **total marks of three subjects**.
30. Write a Python program that calculates the **average marks of three subjects**.
